Investor Reporting Infrastructure Outline

1. **Startup TN GP (General Partner)**
2. I**nvestors (LPs)**

Objective: Define a secure, role-based reporting framework that standardizes post-investment information flow and provides structured portfolio visibility for LPs while supporting GP oversight.

Stakeholder Roles & Core Needs:-

LP (Investor – Limited Partner):-

Primary Objective: Clear visibility into personal investment exposure across summits, vintages, follow-on allocations, and side deals.

Core Needs:

- Consolidated view of all investments across funds/summits
- Investment amount and transaction history (reference to Plooto, where applicable)
- Entry valuation and ownership details (where available)
- Follow-on allocations and additional cheques
- Access to quarterly/bi-annual management updates
- Access to financial statements (P&L, Balance Sheet, notes)
- Secure document archive with historical versions

GP (TNT Management – General Partner)

Primary Objective: Portfolio oversight, governance control, and reporting consistency.

Core Needs:

- Portfolio-wide company performance visibility
- Fund-level allocation tracking
- Mapping of LP participation across companies
- Monitoring of reporting compliance (which companies submitted updates)
- Standardized reporting templates
- Full role-based access control
- Audit trail of submissions and revisions

Company / Founder

Primary Objective: Provide structured, consistent reporting to investors and GP in accordance with defined reporting standards.

- Clear reporting cadence (quarterly/bi-annual)
- Standardized update template
- Secure upload mechanism for financial statements and documents
- Ability to submit management summaries (milestones, key changes, news)
- Historical archive of submitted updates
- Clear understanding of reporting expectations

Information & Access Structure

To ensure governance and clarity, access must be role-based and divided.

LP (Investor)

- Can view only investments in which they have participated
- Can access related transactional records
- Can view associated company updates and financial documents
- Cannot modify investment data or reporting records

GP (TNT Management)

- Full portfolio-level visibility across funds and companies
- Can view all LP participation mappings
- Can monitor reporting compliance
- Can manage role-based access permissions

Company / Founder

- Can submit required updates and financial documents
- Can view historical submissions for their own company
- Cannot view other companies or LP portfolio-level data

Admin

- Can manage user roles and permissions
- Can confirm and enter investment records
- Can organize and maintain document structure
- Can monitor reporting frequency and compliance

Core Functional Components

Based on the stakeholder roles and information structure above, the reporting framework would logically consist of the following components:

Investment Registry

A centralized record of all investments, including:

- LP participation
- Fund/summit allocation
- Side deals
- Investment amount and date
- Entry valuation
- Follow-on portions

Portfolio Dashboard

Role-based visibility into:

- Individual LP portfolio exposure
- Company-level summaries
- Fund-level allocation overview
- Historical investment activity

Secure Document Repository

Structured storage of:

- Initial funding agreements
- Quarterly/bi-annual management updates
- Financial statements (P&L, Balance Sheet, notes)
- Ownership table updates
- Milestone summaries

All documents are timestamped and version tracked.

Reporting Workflow

Standardized submission process for companies, including:

- Defined reporting frequency
- Required update template
- Secure document upload
- Timestamped submission tracking
